1. **How to create a set?**
   - A = {1,2,3}

2. **How to create empty set?**
   - A = set()

3. **What is union?**
   - Combines all unique elements from both sets

   Syntax:

   A | B

   # OR

   A.union(B)

Example:

```
A = {1,2,3}
B = {3,4,5}
print(A | B)
```

4. **What is intersection?**
   - Common elements in both sets

Syntax:

```
A & B
# OR
A.intersection(B)
```

Example:

```
print(A & B)
```

5. **What is difference?**
   - Elements in A but not in B

- **Syntax:**

```
A - B
# OR
A.difference(B)
```

 Example:

```
print(A - B)
```

6. **What is symmetric difference?**
   Elements in A or B but not both

 Syntax:

```
A ^ B
# OR
A.symmetric_difference(B)
```

 Example:

```
print(A ^ B)
```

7. **Check subset?**
   A is subset of B

 Syntax:

```
A.issubset(B)
# OR
A <= B
```

 Example:

```
A = {1,2}
B = {1,2,3}
print(A <= B)
```

8. **Check superset?**
   A contains all elements of B

 Syntax:

```
A.issuperset(B)
# OR
A >= B
```

 Example:

```
print(B >= A)
```

9. **What is disjoint?**
   - No common elements

- **Syntax:**

A.isdisjoint(B)

- **Example:**

```
A = {1,2}
B = {3,4}
print(A.isdisjoint(B))
```

9. **How to copy a set?**

- B = A.copy()
- Example:

```
A = {1,2,3}
B = A.copy()
```

10. **How to clear a set?**
    - A.clear()

- Example:

```
A = {1,2,3}
A.clear()
print(A)  # set()
```

11. Remove element with error?

- A.remove(2)

- Example:

A.remove(5)

12.Pop random element?

- A.pop()
- Example:

```
A = {1,2,3}
print(A.pop()
```

13.Convert list to set?

- set(list_name)
- Example:

```
L = [1,2,2,3]
print(set(L))  # {1,2,3}
```

14.Check element not in set?

- 5 not in A

15.Update set (add multiple)?

- A.update({4,5})
- Example:

```
A = {1,2}
A.update({3,4})
```
